

Let's  
start farming like this !

# Why do chemical farming?

Ever since the start of the green revolution till today, the farmer has been using chemical fertilizers and chemical drugs day in and day out. As a result, the farmer is faced with the following problems.

- The number of microorganisms needed by plants in the soil is decreasing.
- Plants cannot use the nutrients in the soil well.
- Plant immunity and ability to fight pests is reduced.
- Fertility and productivity of soil has decreased significantly. Farming costs have become expensive and the farmer has become poorer.
- Humans and animals have a very bad effect on physical health.

# Don't worry, farmer friends

This is the solution to all

## ➤ By starting pure organic farming

Organic farming means stopping the use of chemical fertilizers and drugs, Agrigold Gromeen, Arican (Bavo Potash), Aki-Zyme and Black Gold (Humic Potassium 98%). Basicel (Bavo. N. P. K.). Increasing the use of organic fertilizers like Agrocan (Black Carbon), Nuti Gold Stopper, Recharge and revitalizing the soil.

## Benefits of organic farming

- Increases soil fertility and productivity and makes the soil healthy,
- Improves the physical condition of the soil and increases the moisture storage capacity of the soil.
- Increases disease and pest resistance of crops.
- Breast becomes healthy and strong,
- The problem of flower and fruit drop is reduced. And the fruit becomes delicious.
- Eating cereals, grains, fruits and vegetables produced by organic farming does not harm our physical health.

# Agrigold Gromeen

## 14% organic carbon

In today's time, the farmer has started using more chemical fertilizers and chemical drugs in the soil to get more production. Due to which the soil becomes hard and unproductive and the soil structure is lost. The only alternative is to consume organic food.

In the past, the soil had a high amount of flaxseed, but due to the use of chemical fertilizers, it has been destroyed and the production is low. So farming is becoming more expensive day by day, so Cochingol Somin Fertilizer is prepared by our company with ultra modern technology. In which complete nutrients are retained. More production at lower cost and fertile land is our main objective.

### How to use

- This fertilizer can usually be applied during soil preparation or after planting, to crops like cotton, groundnut, safflower, potato, tobacco, cumin, wheat, pulses, horticultural vegetables.
- For Cereal Crops : 3 to 4 Prem in Viva
- 4 to 1 bag for vegetables : 1 8 to 10 bags for horticulture

### Elements

- Lemon zest
- The lap of madness
- Dying percolic bacteria
- Karanj Khol
- see you- cow urine
- Borm Pavkar
- Biodumppost

**Available in 40 kg packing**

# Agrican (bio n. p. k.) carrier base consortia

A cure for excellent nutrition and superior production Bio Fertilizer Carrier Base Consortia Bio Fertilizer Granular.

## Advantages

- BELLIFUN BIO N.P.K. Contains nitrogen, phosphorus and potash and micronutrient bacteria.
- Mestiken Bacho N.P.D. Converts inorganic elements in the soil into beneficial forms and supplies them to plants.
- Annie Bo MP1. Provides micronutrients other than essential nutrients to plants to cause chronic disease.
- Atkin came to N.P.K. Being completely organic, its fruits, flowers, or seeds are rich in nutrients.
- Erkit Layo N.P.K. The use increases the immunity of the plant, due to which the farmers chemical
- Use of medicines should be reduced.
- Agricash Let's NP. Fertilizer is a very long-lasting fertilizer.
- Azchem Bathi n, P.K. Manure does not harm the soil in any way so that the soil becomes fertile and increases its productivity.
- Aiken Bachi N.P.K. Manure is the best basic fertilizer for every crop. Apart from this, it can be used in each of the following crops

Apart from this, it can be used in each of the following crops.

Dosage 50 kg  
(1 bag) in one study

## Agrican (black carbon)

### Advantages

After continuous use for 3 to 5 years, the amount of chemicals in the soil is reduced.

- Increases soil carbon content.
- Increases root number and growth very rapidly.
- Balances the pH level in the soil.

- Its effect on plants is long lasting.

Increases soil fertility

- Increases immunity in soil and soil.
- Increases the number of natural organisms in the soil.
- Less use of chemical accounts and medicine.

• Maintains pH (P.H.) in the soil by removing it.

Increases the number of beneficial bacteria and microbes in the soil.

Carbon in the soil maintains the ratio of nitrogen.

**May your field be fertile**

**Available in 50 kg packing**

### Application:

Use Agrican Black Carbon 50 kg per field as base fertilizer within each crop and give second dose at 1 month interval.

# Agrican (Bio Potash)

## Potassium solubilizing bacteria

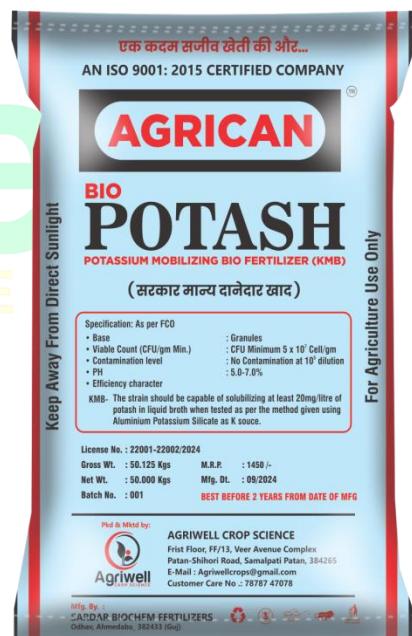

### Advantages

- Agrican bath potash contains potassium solubilizing bacteria and other micronutrients.
- Agrike Bavo Potash is a complete organic fertilizer.
- ACK Bio Potash converts the insoluble potash in the soil into solid form and supplies it to the plants.
- Agrican Bio Potash makes the soil biologically active and increases soil fertility.
- Anerkin Batho Potash enhances the immune system of the lungs.
- Agrican Bio improves flower and fruit quality due to potash.
- Agrican Bio Potash increases fruit size and weight.
- After using Agricand Bio Potash, there is no need to apply Hell Potash fertilizer.
- Aken Batho Potash does not harm the environment and soil.

### How to use

Use 50 kg according to crop requirement and crop period.

**Available in 50 kg packing**

# Agri-Zyme (Organic Granules)

- Agri Zyme Granulars are a coating of naturally derived active hormones from seaweed, humic acids, amino acids and nutrients and minerals required by crops.
- Agri-Zyme Granules is an environmentally safe functional food. It provides excellent nutrition to plants as it contains phosphorus, potassium and essential trace elements such as zinc, manganese, arsenic and amino acids.

## Advantages

- For overall development of strong roots.
- In the long run, the use of granules increases production and reduces costs.
- Application of Ac-gyme granules increases soil fertility.
- Regular use of AC-Zyme Sensus reduces the need for other fertilizers. Increases the number of fruits and flowers and makes the overall development of the plant.
- Increases plant vigor by early formation of fibrous roots and rapid growth.
- Increases the number of fruits and flowers and makes the plant grow. Increases plant vigor by early formation of fibrous roots and rapid growth.
- With the use of Agri-Zyme, there is no danger of yellowing and wilting of the crop even with low rainfall
- And works to maintain sufficient moisture in the crop.

## Note

Agri-Zyme is granular and can be used along with other fertilizers.

## Use

Cotton - Banana Wheat Castor  
Sugarcane Potato - Millet

Cumin - Paddy - Groundnut  
Vegetables #horticultural crops

## Available

in 10 kg packing

Rate: 1 to 2 buckets per 1 acre

**Agriwell**  
CROP SCIENCE

## Black Gold (Humic Potassium 98%)

- Uric acid is very important in organic farming. Black mold is prepared keeping in mind all the crops which fulfill the basic needs of the crops. And each plays an important part in crop production. It makes a very important contribution to development.
- Black gotak contains elements like humic acid, fulvic acid and miconutan. By spraying according to the requirement of the crop, it makes the crop grow faster and keeps the crop green and prevents the diseases in the crop.

### Advantages

- Black Gold is a humic urea fertilizer supplement. So urea can be used instead of fertilizer.
- Awakens the inner strength of the plant.
- Increases plant immunity. In plants photosynthesis occurs.
- Eliminates nutrient deficiencies.

### How to use

- Any crop can be mixed with any fertilizer during seed coating before planting and after planting.
- Black Gold can be easily applied during crop extension in water and by spraying.

### Proportion

Add 20 to 30 grams to 15 liters of pump water and sprinkle. 1 kg crop in one acre can also be given in drip irrigation.

**Available in 500 gm and 1 kg packing**

# Nutty Gold (Plant Booster Slurry)

- product made with modern nano technology.
- Contains carbon derived from natural protein sources and 16 elements found in soil
- Increases soil pH and soil fertility due to increased organic carbon (CN).
- Increases plant growth and productivity.
- Makes soil nutrients and fertilizers available to plants, resulting in plant growth and increased production.
- Protects every environment and keeps plants disease free.

Available in 5 liter packing.

Application: Use 5 liters per acre

## Stopper (Botanical Bio Controller)

Bath is an organic disinfectant, a product made from plant extracts.

Stopper is effective against leaf-eating insects such as green caterpillars, pink caterpillars, caterpillars and leap miners that suck leaves, fruit and total sap.

Controls the way Packing : 100 ml, Rs.0 ml.

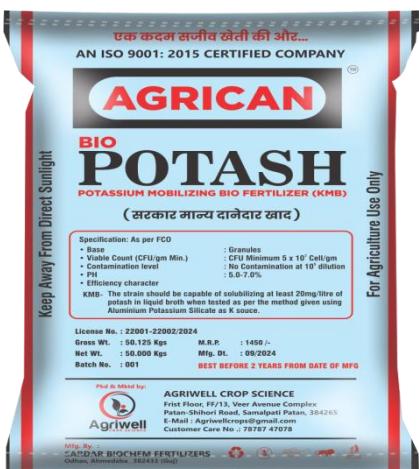

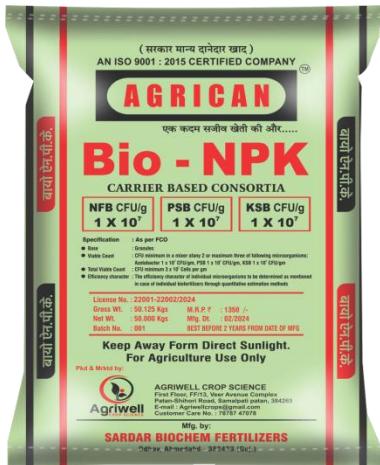

Dosage: 20 ml in 15 liters of water.

## Recharge (Humic+Amino+Vitamin)

- A mixture of compost made from bio-technology such as humic and marine sediments.
- A similar product formulated from sea urchin extract and natural protein and high quality
- Increases the absorption capacity of micronutrients in all types of crops and helps to increase the keeping power of the total-fruit.
- provides beneficial protection in all environments

**Packing: 250 ml, 500 ml, Dose: 30 ml in 15 liters of water**
